

How to choose a Scooter

Scooter sizes

Scooters are split into three sizes: Portable (or small), medium (mid-sized) or large.

Example of a large scooter: Sportrider

Example of a medium scooter: Pathrider Sports DX

Example of a Portable scooter: GoGo Elite Plus

How to choose the right scooter!

1. What you need to use the scooter for.
2. Where you need to use the scooter.
3. Frequency of usage.
4. Portability.
5. Dexterity of user.
6. Height and weight of user.
7. Affordability.

Example of answers to the questions

1. Mrs Scooter needs a scooter because she can't walk very far from arthritis. She needs the scooter to do shopping once a week, visit the doctor, family and friends that live within a 10K radius at least every 2nd day. She is only 5' 6" and weighs approximately 85 Kg. She lives in a relative flat area in a unit on the ground floor. This would mean that a choice from the Medium range of scooters would be best. i.e. Pathrider Sports DX, Pathrider 10, Gopher, Pathrider DX.
2. Mr Scooter needs a scooter because of a heart condition. He needs it only for indoor use family and shopping. He is still able to drive but not over exert himself. He is 5' 10" and weighs approximately 110 Kg. This would mean that a choice from the small Portable range of scooters would be best. i.e. GoGo LX, GoGo Elite Plus or the Revo
3. Mr Get Around needs a scooter because of his disability. He likes to be out every moment he can. He lives in a fairly hilly area and quite some distance from any conveniences. He is 6' and weighs approximately 120 Kg. This would mean that a choice from the large range of scooters would be best. i.e. Sportrider, Gopher LX, Pathrider 140XL, Pathrider 130XL.
